Ball Mill Girth Gear x3
Heavy Lift
Cleaning
Wooden Supports
Shrink Wrapping
Fumigation
Transport
Cargo Loading
Cargo Lashing

Our valued partner, Australian-based freight forwarder Henning Harders employed FPT Global for the urgent transportation and compliance for three sections of a Ball Mill Girth Gear. Each gear section weighed 22 tonnes and measured 8x2x0.98m.

The cargo was securely loaded at its Laos origin and transported across the border into Thailand. The gear sections arrived at the FPT facility in Laem Chabang and were safely lifted off and positioned by a mobile crane to allow for the remediation to begin. FPT project teams, along with a qualified Bio-Security Inspector, carried out a visual inspection to ascertain the amount of cleaning required to meet the Australian import regulations.

Deep cleaning teams used high-pressure washers and other cleaning equipment to ensure full compliance and were duly given the Certificate of Cleanliness by the Bio-Security Inspector. Material teams applied preservation sprays and sealed the cargo in industrial grade shrink wrap.

The gear sections were then loaded, secured and lashed on to Flat Rack Containers that had also undergone Bio-Security inspections and cleaning. The Flat Racks and their cargo were transported to Laem Chabang Port and loaded on to the designated vessel bound for Australia. This urgent project was completed in a timely and efficient manner, much to the delight of Henning Harders.
